*Simplifying the Transition to Awesome UI and Mobile for Oracle E-Business Suite.*

*Enhance Oracle E-Business Suite Self-Service Human Resources (HR) with an intuitive user interface and mobile experience for employees and managers.*

### Company Overview

Formed in 2008 by experts in the Oracle HR community, Applaud is an Oracle partner offering phone, tablet, and desktop apps for Oracle E-Business Suite Human Capital Management (HCM) solutions. Specializing in rich user interface solutions, we help clients modernize their Oracle E-Business Suite HR implementations with an improved desktop user experience complemented by mobile apps for the Apple iPhone and iPad and Android devices.

### Integration Overview

Applaud Self-Service version 3 is a software product that addresses common usability challenges in Oracle E-Business Suite HCM modules. There are three components to the solution:

**Desktop user interface** — new screens built with modern UI technology that replaces some of the Oracle screens currently used within Oracle E-Business Suite Self-Service HR accessed via a desktop web browser.

**Smartphone app** — a new native app built for the Apple iPhone and Android devices that provides HR processes for Smartphone users.

**Tablet app** — new native app built for the Apple iPad and Android Tablets that provides HR processes for tablet users.

### Integration Details

Applaud Self-Service is a software product built for Oracle E-Business Suite 12.2 and installs into your existing infrastructure. The UI and mobile apps use a web service framework to read and write directly to your Oracle E-Business Suite HCM modules using supported Oracle APIs. There are no interfaces or separate security to set up—this is a new user interface that sits on top of your existing HR data, using the existing infrastructure you have in place for Oracle E-Business Suite 12.2.

### Validated Integration

Oracle E-Business Suite

Oracle Validated Integration gives customers confidence that a partner's integration is functionally sound and performs as designed. This can help customers to reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.
